Engineering Intern applicant
University of South Carolina
Columbia, SC 29012

Dear Sir/Ma'am,

I appreciate the opportunity to apply for the engineering intership position in South Carolina. I am versed in the basic processes, procedures and operational goals due to my work history experience. I do understand the company's has a favorable worldwide market and growth prospects. I work hard, very loyal and plan to remain with the company once the internship is completed. I would be proud to work for a successful and quality products and services enterprise. I know that in South Carolina I can be a key influence in refining the system to work more efficiently, I have trained other in military occupation and medical health provider personel to occupation systems and can do the same for this system once my feet are ground. I have and will bring higher standards to any department and be a valuable company asset. I am very independent and a self motivated who requires no monitoring. The work I do is accurate, precise work and tend to manage a higher work load. I will meet all my work goals, have handled every project assigned and regularly lay out new personal achievement goals. I am continuously looking to advance my work experiences, education and certifications to be capable to sustain a good standing that will benefit not only myself but also company. I am looking to globalize my job experiences with this firm and eventually hold an leadership status and responsibilities within the company. I feel with my knowledge and experience we can formulate a plan to construct a mission focused operation and processes that will meet the company needs.

Sincerely,

Antonio Fonce
